Data Request Form

Title	
Principal Investigator	
Co-Investigators	
Institution(s)	
Approval (Signature)	
Anticipated Start Date	

Specific Hypotheses and Aims of Study:

State the broad objective of the study and its specific aims. List both the primary hypothesis and any secondary hypotheses.

Background/Literature Review:

Examination of the literature to identify how other investigators have addressed the question of interest. Include study authors, title of article, journal, publication date. Describe study design, inclusion/exclusion criteria, outcome variables, predictor variables, statistics and results. Describe study limitations. Summarize literature review.

Methods (Describe research plan including subjects, variables examined, data analysis plan, limitations, etc.)

Significance and Potential Impact on Practice or Research

Important, novel, timely, relevant, critical, prevalent problem addressed? Practical, useful implications that may improve clinical practice or guide future research?
